Project: Design a Village Hall to serve a growing community at occupancy and continuing use for twenty years. This 56,000 square foot building is designed as two levels of office, community, government, and service space with 12,000 square feet of attic space used for mechanical equipment.

Full architecture services were provided from programming/needs study through construction administration. Postl-Yore provided team construction management services in working closely at covering equipment, furniture, adjusted Village services, approach roads, existing Village Hall adjustments for Police occupancy and establishing and holding delivery. Preliminary design began in 2002 and construction started in June of 2005. The Village moved into the facility in February of 2007.
